1. Project Overview

YatraCanvas is a frontend-only Flutter travel-planning application. It guides a traveller from first-run onboarding into a five-step trip creator that collects destination, dates, arrival, purpose, and preferences. A separate responsive admin frontend demonstrates future management of trips, destinations, travellers, and reports.

Core memory hook

Destination -> Dates -> Arrival -> Purpose -> Preferences (D-D-A-P-P).

Main features

- Animated splash, welcome, and frontend-only login interfaces.
- Ten-step personalisation journey controlled by PageView.
- Home dashboard with continue, create, moods, popular destinations, and recommendations.
- Five-step trip creator sharing one mutable TripDraft object.
- Responsive admin panel with Overview, Trips, Destinations, Travellers, and Reports.
- Central Material 3 theme, SVG logo, local mock data, and widget tests.

Current scope

The inspected project has no backend, database, real authentication, live map, API client, persistent session, or server-side admin permissions. Placeholder actions show SnackBars or use empty callbacks.

Technology	Purpose
Flutter	Cross-platform UI framework
Dart	Screens, widgets, models, state, and navigation
Material 3	Buttons, cards, inputs, navigation, dialogs, and themes
flutter_svg	Renders lib/Logo/logo.svg
flutter_test	Widget and navigation tests

2. Complete Application Workflow

Complete traveller and admin workflow

Solid arrows are implemented navigation or section changes. Placeholder Home actions show SnackBars.

The traveller application starts at Splash, automatically opens Welcome, then moves through Login and ten personalisation pages. Completing Profile Setup clears the earlier route stack and opens Home. Home starts the five-step trip flow. The admin application uses a separate entry point and changes sections with local index state rather than Navigator routes.

3. Screen Navigation

Screen navigation

Back controls pop routes. Onboarding uses an internal, non-swipeable PageView.

Navigation implementation

Direct MaterialPageRoute calls are used. Splash uses pushReplacement. Onboarding completion and Back to Home use pushAndRemoveUntil. Trip Back controls call Navigator.pop().

4. Complete Screen Documentation

The following visual atlas documents 25 captured states: 24 application views plus the trip-completion dialog. Every image was captured from the running Flutter web builds; no Wanderlog reference image is presented as an application screenshot.

1. Splash Screen

	Purpose Animated brand startup while the application initializes. What is shown • YatraCanvas logo and tagline • Linear loading indicator • Fade and scale animation Buttons and actions • Automatic timer opens Welcome after about 1.9 seconds Important widgets Scaffold, OnboardingCanvas, FadeTransition, YatraBrand Important file lib/screens/onboarding/splash_screen.dart
---	--

Actual running application capture: 01-splash-screen.png

2. Welcome Screen

YatraCanvas

PLAN • DISCOVER • REMEMBER

Turn your travel ideas into a journey.

Shape a thoughtful trip from the moment you arrive, with every place connected into one clear story.

2 days · 8 places

→ Start Your Journey

Purpose
Introduces the travel-planning idea and gives the user a clear starting action.

What is shown

- Brand and large headline
- Custom-painted route illustration
- Fixed bottom call-to-action

Buttons and actions

- Start Your Journey opens Login

Important widgets
SingleChildScrollView, Stack, CustomPaint, PrimaryButton

Important file
[lib/screens/onboarding/welcome_screen.dart](#)

Actual running application capture: 02-welcome-screen.png

3. Login Screen

	Purpose Offers phone, Google, Apple, and guest entry. Authentication is not connected. What is shown • Country-code selector • Phone-number field • Four entry actions Buttons and actions • Back returns to Welcome • Phone requires at least seven digits • Every provider action opens onboarding Important widgets TextField, DropdownButton, PrimaryButton, SecondaryButton Important file lib/screens/onboarding/login_screen.dart
--	--

Actual running application capture: 03-login-screen.png

4. Language Selection

Purpose
Selects the preferred travel-planning language.

What is shown

- Five language choice cards
- Step 1 of 10 progress
- English selected by default

Buttons and actions

- Language card updates local state
- Continue opens the welcome step

Important widgets
PageView, ProgressHeader, AnimatedContainer, PrimaryButton

Important file
[lib/screens/onboarding/personal_interests_screen.dart](#)

Actual running application capture: 04-onboarding-language.png

5. Personalisation Welcome

	Purpose Explains why YatraCanvas asks a few personalisation questions. What is shown • Journey medallion • Namaste greeting • Short explanation Buttons and actions • Let's Personalise opens Planning Style Important widgets Stack, Icon, ProgressHeader, PrimaryButton Important file lib/screens/onboarding/personal_interests_screen.dart
--	--

Actual running application capture: 05-onboarding-welcome.png

6. Planning Style

CHOOSE ALL THAT APPLY

What are the hardest parts of planning?

 Too much time spent researching ☒

 Sorting through too many options ☐

 Knowing what is truly worth it ☐

 Keeping plans in one place ☐

 Transport and stays ☐

 Building a well-paced itinerary ☐

→ Continue

Purpose

Collects multiple difficulties experienced during planning.

What is shown

- Six multi-select cards
- Research, options, value, organisation, transport, and pacing

Buttons and actions

- Cards toggle a Set of challenges
- Continue requires one selection

Important widgets

AnimatedContainer, InkWell, Set<String>, PrimaryButton

Important file

READY FOR THE ROAD

Built to guide you from idea to itinerary

**Offline-ready plans**
Keep essential details close even when signal is not.

**Thoughtful assistance**
Get help shaping a trip around your pace.

**Clear route planning**
See travel time between stops before the day begins.

**Shared decisions**
Collect ideas and plan together.

→ Set Up My Profile

Purpose
Summarises four product-direction features before profile setup.

What is shown

- Offline-ready plans
- Thoughtful assistance
- Route planning
- Shared decisions

Buttons and actions

- Set Up My Profile opens the final step

Important widgets
Feature tiles, Icon, Column, PrimaryButton

Important file
[lib/screens/onboarding/personal_interests_screen.dart](#)

Actual running application capture: 12-onboarding-features.png

13. Profile Setup

	Purpose Collects a display name and completes first-run onboarding. What is shown • Profile avatar • Display-name field • Terms and Privacy note Buttons and actions • Enter YatraCanvas clears earlier routes and opens Home Important widgets TextField, ProgressHeader, PrimaryButton, Navigator Important file lib/screens/onboarding/personal_interests_screen.dart
--	--

Actual running application capture: 13-onboarding-profile.png

14. Home Screen

Purpose

Main traveller dashboard and entry point for creating a trip.

What is shown

- Continue Planning card
- Create Journey card
- Mood chips
- Popular destinations
- Recommendations
- Five-item bottom navigation

Buttons and actions

- Create card and Create navigation open Destination Selection
- Other discovery actions currently show placeholder SnackBars

Important widgets

CustomScrollView, SliverList, ListView, AppBottomNavigation

15. Destination Selection

←

Where are you going?

Search for the city or destination you want to explore.

Q Search destinations

Recent searches

Ujjain, Madhya Pradesh

Popular destinations

- Ujjain
Madhya Pradesh
- Jaipur
Rajasthan
- Varanasi
Uttar Pradesh
- Goa
Konkan Coast
- Manali
Himachal Pradesh
- Udaipur
Rajasthan
- Bengaluru
Karnataka
- Mumbai
Maharashtra

→ Continue

Purpose
Searches local mock data and stores the selected destination in TripDraft.

What is shown

- Search field and clear action
- Recent Ujjain chip
- Eight local destinations
- Selected preview

Buttons and actions

- Continue is enabled only after a selection
- Back returns to Home

Important widgets
CreateTripScaffold, SearchField, ActionChip, AnimatedContainer

Important file
[lib/screens/create_trip/destination_selection_screen.dart](#)

Actual running application capture: 15-destination-selection.png

16. Select Dates

Purpose

Collects exact August 2026 dates or a flexible duration.

What is shown

- Flexible-date switch
- Seven-column calendar
- Duration summary

Buttons and actions

- Calendar taps set start and end dates
- Continue writes dates to TripDraft

Important widgets

GridView, Switch.adaptive, AnimatedSwitcher, SelectionChip

Important file

[lib/screens/create_trip/select_dates_screen.dart](#)

Actual running application capture: 16-select-dates.png

17. Arrival Details

←

How are you reaching Ujjain?

Your journey will start from where you arrive.

Arrival method

Train Flight Bus Car ... Other

Where will you arrive?

Ujjain Railway Station

Approximate arrival time

8:30 AM

START - 8:30 AM

Ujjain Railway Station

Your itinerary will begin here.

→ Continue

Purpose
Collects the arrival method, point, and approximate time.

What is shown

- Train, Flight, Bus, Car, and Other cards
- Arrival-point suggestions
- Time picker field
- Start summary

Buttons and actions

- Method and point update local state
- Continue writes arrival details to TripDraft

Important widgets
Wrap, TextField, ListTile, showTimePicker

Important file
[lib/screens/create_trip/arrival_details_screen.dart](#)

Actual running application capture: 17-arrival-details.png

18. Trip Purpose

Actual running application capture: 18-trip-purpose.png

19. Trip Preferences

Purpose

Collects pace, budget, and preferred transport and shows the full draft summary.

What is shown

- Relaxed, Balanced, Packed
- Saver, Chill, Boujee
- Four transport chips
- Trip at a Glance

Buttons and actions

- Find Places For Me requires transport and opens the completion dialog

Important widgets

SelectionChip, Wrap, AlertDialog, CreateTripScaffold

Important file

[lib/screens/create_trip/trip_preferences_screen.dart](#)

Actual running application capture: 19-trip-preferences.png

20. Trip Setup Complete Dialog

Purpose
Confirms that all five trip forms have been completed.

What is shown

- Success icon
- Review setup
- Back to Home

Buttons and actions

- Review closes the dialog
- Back to Home clears the route stack

Important widgets
AlertDialog, TextButton, FilledButton, Navigator

Important file
[lib/screens/create_trip/trip_preferences_screen.dart](#)

Actual running application capture: 20-trip-complete-dialog.png

21. Admin Overview

Actual running application capture: 21-admin-overview.png

Purpose

Summarises sample activity across the frontend-only admin panel.

Visible UI

- Four metric cards
- Route Pulse chart
- Needs Attention
- Recent Trips

Actions

- Sidebar switches sections
- Search and trip rows show SnackBars

Important widgets

LayoutBuilder, CustomPaint, Wrap, Drawer

File

[lib/admin/screens/admin_panel_screen.dart](#)

22. Admin Trips

Actual running application capture: 22-admin-trips.png

Purpose

Displays sample traveller journeys and planning statuses.

Visible UI

- Four trip rows
- All, Planning, Ready, Confirmed filters
- Export action

Actions

- Filters change visual state
- Rows and Export show demo feedback

Important widgets

ManagementPage, ChoiceChip, PanelCard, IconButton

File

lib/admin/screens/admin_panel_screen.dart

23. Admin Destinations

Actual running application capture: 23-admin-destinations.png

Purpose

Displays a responsive grid for future destination content management.

Visible UI

- Six destination cards
- Published status
- Filter chips
- Add and Edit actions

Actions

- Add and Edit show SnackBars
- No data is persisted

Important widgets

LayoutBuilder, Wrap, Stack, StatusPill

File

[lib/admin/screens/admin_panel_screen.dart](#)

24. Admin Travellers

Actual running application capture: 24-admin-travellers.png

Purpose

Displays sample travellers, emails, and trip counts.

Visible UI

- Five traveller rows
- Avatar initials
- Filter chips
- Export action

Actions

- Filters are visual only
- More actions has an empty callback

Important widgets

ListTile, CircleAvatar, ChoiceChip, MediaQuery

File

[lib/admin/screens/admin_panel_screen.dart](#)

25. Admin Reports

Actual running application capture: 25-admin-reports.png

Purpose

Demonstrates a review queue for traveller-reported information.

Visible UI

- Three reports
- Priority pills
- Open, High Priority, Resolved filters

Actions

- Mark reviewed shows a SnackBar
- Mark all is a demo action

Important widgets

ReportTile, StatusPill, ChoiceChip, IconButton

File

[lib/admin/screens/admin_panel_screen.dart](#)

5. Reusable and Custom Widgets

Widget	Purpose	Important parameters / use
YatraBrand	SVG logo and wordmark	compact, light; Splash, Welcome, Login, Home
PrimaryButton	Standard main action	label, onPressed, icon, loading, expand
SecondaryButton	Outlined secondary action	Google and Apple login
ProgressHeader	Back, progress, optional Skip	currentStep, totalSteps, onBack, onSkip
CreateTripScaffold	Shared five-step form layout	step, title, child, continue state
OnboardingCanvas	Shared white first-run surface	child
SearchField	Search input with clear action	controller, callbacks, focus options
SelectionChip	Animated selectable pill	label, selected, icon, onSelected
SectionHeader	Section title and optional action	title, subtitle, actionLabel
AppBarBottomNavigation	Material 3 navigation bar	items, selected index, prominent index
DestinationCard	Reusable destination card	name, location, image, tag, selected
PlaceCard	Selectable place summary	name, description, image, category, meta
TripCard	Trip image, dates, members, progress	title, destination, dateRange, progress

Important standard Flutter widgets

Widget group	How it is used
MaterialApp, Scaffold, SafeArea	Application shell, page structure, and system insets
Column, Row, Stack, Container	Core layout and visual composition
CustomScrollView, SliverList, ListView	Home dashboard and horizontal content
SingleChildScrollView, PageView, GridView	Forms, onboarding steps, and calendar
FilledButton, OutlinedButton, TextButton, IconButton	Primary, secondary, and compact actions
TextField, Switch, ChoiceChip, ActionChip	User input and selection controls
InkWell, Semantics	Material tap feedback and accessibility state
CustomPaint	Welcome route illustration and admin chart

6. Project Structure and Important Files

```
YatraCanvas/

`-- pubspec.yaml
```

File	Purpose
lib/main.dart	Traveller entry; theme, 600 px content constraint, Splash
lib/main_admin.dart	Separate admin entry point
lib/admin/screens/admin_panel_screen.dart	Responsive shell and five admin views
lib/screens/onboarding/personal_interests_screen.dart	Ten onboarding pages and state
lib/screens/home/home_screen.dart	Traveller dashboard and Create entry
lib/screens/create_trip/*.dart	Five guided trip forms
lib/models/trip_draft.dart	DestinationOption, TripDraft, TimeOfDayValue
lib/data/mock_data.dart	Eight destinations and three arrival points
lib/theme/*.dart	Colour, typography, and Material 3 theme
test/*.dart	Traveller, admin, flow-update, and label tests
pubspec.yaml	SDK, packages, version, and SVG asset

7. Application Architecture

Frontend architecture

The same mutable TripDraft object is passed through the five trip screen constructors.

- Two independent MaterialApp entry points serve traveller and admin frontends.
- Screens own temporary state with StatefulWidget and setState.
- Shared widgets and theme tokens reduce repeated visual code.
- TripDraft is passed through constructors across the five trip screens.
- MockData supplies local destinations and arrival points.
- Navigator and MaterialPageRoute connect traveller screens.
- No service layer, backend, API, dependency injection, or global state library is present.

Packages

Package	Type	Purpose
flutter	SDK	Core UI, Material, navigation, animation, and state
flutter_svg ^2.3.0	Runtime	SVG logo rendering
flutter_test	Dev SDK	Widget and navigation tests
flutter_lints ^6.0.0	Dev	Recommended analysis rules

8. Honest Limitations and Future Scope

Current limitations

- No backend, database, cloud storage, or persistent user session.
- Login buttons demonstrate navigation but do not authenticate.
- Most Home discovery actions are placeholders that show SnackBars.
- Trip completion does not generate a real itinerary.
- Calendar dates are fixed to August 2026.
- Destination and arrival data are local and limited.
- Admin actions do not mutate server data and have no permission model.

Recommended phases

Phase	Possible work
1	Backend API, database schema, authentication, and persistence
2	Maps, destination search API, transport, and place information
3	Itinerary generation, route optimisation, and budget estimates
4	Collaborative planning, invitations, comments, voting, and notifications
5	Secure admin roles, moderation workflows, analytics, and audit logs

How to explain the scope

The current academic version validates the frontend flow, interaction design, reusable architecture, responsive behaviour, and cross-platform implementation before backend integration.

9. Faculty Presentation Cheat Sheet

30-second introduction

Say this

YatraCanvas is a Flutter frontend prototype for structured travel planning. It turns scattered ideas into a five-step guided trip draft: destination, dates, arrival, purpose, and preferences. The project demonstrates reusable widgets, a central design system, local state, mock data, widget tests, and a separate responsive admin interface.

Three-minute walkthrough

Step	What to explain
1	Start with the problem: travel ideas and logistics are scattered.
2	Show onboarding and explain that the app learns planning style and goals.
3	Open Home and identify continue, create, moods, destinations, and recommendations.
4	Demonstrate D-D-A-P-P: Destination, Dates, Arrival, Purpose, Preferences.
5	Explain that one mutable TripDraft carries selections across the five forms.
6	Point to reusable widgets and central theme files.
7	Show the separate admin entry and responsive sidebar/drawer.
8	Finish honestly: the current version validates frontend architecture; backend is future work.

Final verified totals

Item	Total
Documented application views	24
Captured screenshots	25
Reusable custom widgets	13
Architecture and workflow diagrams	3
Reference images kept separate	31

Final line

YatraCanvas demonstrates that a complex travel-planning problem can be made understandable through a guided flow, reusable Flutter components, and a consistent visual system.
